Turn off the camera's power switch before connecting or disconnecting the power cord. Be careful that the cord does not get pinched between the magazine and bge3 battery grip. Bookmark the permalink. Notify me of new posts via email. To find out more, including how to control cookies, see here. It may not display this or other websites correctly. You should upgrade or use an alternative browser. It fits the Canon XT,XTi, and the new XSi. I bought one on ebay and they didn't include the user's guide. It's easy enough to attach, but I'd like to learn about a few of the buttons. Thanks in advance Bob It fits the Canon XT,XTi, and the new XSi. Thanks in advance Bob Click to expand. The third button simply turns the other two on and off. The alternate shutter release and selector dial are for when you turn the camera vertical for portraits etc. Just turn them on, and you won't have to reach way across that battery pack and the rest of the camera to press the shutter release or change exposure settings. BTW, did you figure out where to clip the battery compartment door once you've removed it. Canon was actually thinking a bit when they designed that one. I'd just like the whole thing to be a bit lighter once it's all assembled. Hope this helps, Dudley I got more of a chance to play with it and now feel a lot more comfortable. The weight is a bit of an issue, but I find the battery grip fits in my hand better than the camera. I'm very pleased with it overall. Thanks again Bob She likes it as well, in spite of how heavy it is because it dramatically increases the number of pics she can take before the juice runs out of the camera, not hers. The only problem I foresee is that the combo of the camera, the battery pack and a better, larger aperture lens, is going to be a bit intimidating. I'll have to pick her new lens with care. Take Care, Dudley Get a hand strap for it. I think it called a E1 hand

strap or something like that. Once you get the connection figured out and adjusted.<http://catskillpatriots.org/userfiles/dynavector-p75-mk2-manual.xml>

You put your hand under it and grip the camera like normal. The hand grip will take most of the camera weight. You can hold and shoot and carry the camera with just your right hand and not even try to do it. You won't leave home without it. Steve Get a hand strap for it. You won't leave home without it. Click to expand. I've got one for my 10D and did use it for a little while. But it seems that most of the time, an over-the-shoulder strap works best for me. Whatever. I've got one for my 10D and did use it for a little while. But it seems that most of the time, an over-the-shoulder strap works best for me. Whatever. Click to expand. Where the hand grip comes in is taking the load off of your fingers. The battery grip does add weight, but it also adds length to the bottom of the camera that rests on the palm. The combination of the battery grip and the hand strap allows great camera control, even with heavy camera at my side. As for a carry strap, well I took a small length of normal strap material and tied both ends to a split ring. Then run the double strap through the strap bar on the left side of the camera and loop it over the split ring and draw it tight. Then I use the split ring to connect both ends of a normal carry strap using quick connect hooks. The camera just hangs off that. Yes, it does look a bit strange hanging from one side. But, it works and I have a hand strap and a carry strap and a nice battery grip to hold on to. Steve. After that, you can post your question and our members will help you out. The BGE3 holds up to two NB2LH batteries or six AA size batteries to offer double-length shooting time. The vertical shutter release makes shooting with the camera in a vertical position just as comfortable as shooting horizontally. The BGE3 also adds much needed size and weight to the camera especially with longer lenses. The BGE3 can be used with just one NB2LH battery in either slot. The additional Handstrap E1 can be added for a more secure grip. I think thanks to you for doing it in the first place. I had to make it all one page, I would have loved to leave as it was, it's a fine piece of work. Views and opinions posted are my own, and not necessarily those of TalkPhotography.co.uk If only you could accomplish 5% of what I have done. Will never happen. What a joke! If the truth be known, 350d owners are attracted to the grip for the extra size and weight more than anything else so the 20d and 1d owners stood at the side of them don't howl in laughter and come out with the wheres your keyring jokes! Views and opinions posted are my own, and not necessarily those of TalkPhotography.co.uk If only you could accomplish 5% of what I have done. Will never happen. What a joke! Views and opinions posted are my own, and not necessarily those of TalkPhotography.co.uk If only you could accomplish 5% of what I have done. Will never happen. What a joke! I have now the money to buy it but I was thinking if it worth to wait a few months for the 20d. The XT is a great camera but like anything else in life, I'd go for the best I can afford. I would have loved the 20d but it would have been a long while before I could have afforded anything else to go with it so I made the decision that fitted my shallow pocket. I'm certainly not disappointed with it though and the battery grip bulks it up nicely. Consider the price of the grip and the price gap between the 2 cameras and realise the money for the grip could be put towards the 20d.

Another thing is that actually I have 2 cameras, a Film Rebel Xs with a few lenses that fit perfectly both xt and 20d. And a Canon Powershot S70, which uses the same battery than the XT and I have 2 batteries now, if I get the XT and the grip, I don't need to spend more in batteries, with the 20d, I will have to spend in batteries and charger too..oh god, it's a difficult decision hehe. I've read a lot of reviews, comments, etc. Don't intend to make this thread another 20d vs Xt discussion, I think that

my pocket will decide over my feelings, I know I will be very very happy with anyone. Cheers That maybe different in Mexico though Actually my 20d or Xt, I will buy in US at beachcamera.com thats the best price I found. Here in Mexico are very, very expensive. Thats why its so difficult for me to get one. Very happy indeed, thanks again Bachs. Views and opinions posted are my own, and not necessarily those of TalkPhotography.co.uk If only you could accomplish 5% of what I have done. Will never happen. What a joke!So Ill be getting one later this year. Thanks to Bachs right up, mmm now just need to fit a bit of overtime!!! The instruction sheet specifies use of Alkaline batteries but I have had no problems running the grip with rechargeable Nimh AA batteries. You can insert two NB2LH batteries with different charging levels without problems. Do not use old and new batteries together and ensure they are all the same brand. The rest of the buttons and dials on the BGE3 grip function in exactly the same way as those on the camera.The number of shots is not affected by this false reading. Perhaps later though, right now Im still saving for more lenses. Leo By continuing to use this site, you are consenting to our use of cookies.

The BGE13 allows a full sized portrait grip See the small slider on the inside portion of the door hinge Pop the door off, slide the BGE13 into the battery slot One option allows two Canon NB2LH batteries The other option allows 6 AA batteries to be used. With the Canon BGE3 Battery Grip installed, larger lenses are much easier to control and The BGE3 is a very nice accessory for the Thus, I depend solely on the commissions received from you using the links on this site to make any purchase. considers things like how recent a review is and if the reviewer bought the item on Amazon. It also  
analyzes reviews to verify trustworthiness. See All Buying Options Add to Wish List Disabling it will  
result in some disabled or missing features. You can still see all customer reviews for the product.  
Yet for a modest price, the battery grip is a very nice upgrade. The obvious benefits of the battery  
grip BGE3 are the increased battery capacity and the vertical shutter button. I always hated the  
awkward position of reaching for the stock shutter button during vertical shots with my elbow raised  
high like a chicken wing. The camera also balances out very nicely with the battery grip when larger  
zoom lenses are attached.

On the contrary to most other users that like the grip mainly because they have larger hands, I have  
small hands but I still like the grip and it is very comfortable for my own use. To attach the grip to  
the XTi you first have to remove the stock battery door. The way you remove the battery door on the  
XTi and I assume it's the same method on the XT is you open the battery door with the camera  
inverted upside down and the lens facing you. Look for the tiny protruding Phillips head screw on  
the door hinge. No you do not need a Phillips head screwdriver. You can simply just use your  
fingernail or something small to slide the spring loaded door hinge by pressing sideways against that  
protruding screw towards the right to remove the hinge. After you remove the door there is a helpful  
storage slot on the left side of the battery grip just in front of the protruding battery connector that  
goes in the battery box. Going to a small party or long walk in the park. I'll just bring the XTi. Going  
to shoot photos for a graduation or wedding. I'll bring my battery grip with the XTi. Overall, the  
battery grip makes my XTi look very professional for a modest budget without spending the extra  
thousands on Canon's elite level of digital SLRs. This accessory is highly recommended if you want to  
upgrade the performance of your XTi or XT. Reviewed in the United States on May 9, 2006 I have a  
fairly heavy Sigma zoom lens on my Rebel XT and it's a bit heavy already, so this battery grip easily  
puts it over the limit. I consider myself somewhat of a tough guy and I'm usually the one that tells  
other people to quit whining. I pride myself in not complaining about discomfort and inconvenience.  
I have one of the heaviest laptops you can buy and would get one twice as heavy if the performance  
justified it. I wear glass lens safety glasses that my wife says are far too heavy. In spite of all this, I  
refuse to wear my camera around my neck with this battery pack on it.

It may be ok for weddings or something like that but you don't want to take this to the zoo for a day  
or on a hike in the mountains. I must admit that most of the weight is from the batteries so it can not  
be avoided. The battery pack does contour very nicely to the camera and is handy for vertical shots  
but it's hardly necessary. You'd need to have extremely large hands to justify buying this for comfort.  
I still carry mine for emergencies but you're better off just having a couple of extra batteries. You can  
get generic ones extremely cheap that last more than long enough to recharge the Canon battery.  
Please try again later. David Baltazar 5.0 out of 5 stars Yet for a modest price, the battery grip is a  
very nice upgrade. This accessory is highly recommended if you want to upgrade the performance of  
your XTi or XT. Please try again later. Please try again later. Nancy 5.0 out of 5 stars I went to the

Morton Arboretum last summer. I was running late. OMG OMG OMG. I bent over. picked it up. looked the entire camera over. After a complete check of the grip. I cant use it to take portraits easily due to the button damage. After a complete check of the camera. Nothing wrong with the camera body or lens. Maybe the grips weight pulled it towards the ground. Whatever reason. I want another one. Please try again later. Please try again later. April 26th, 2008 You can read more on some of my other Reviews. Before, I begin I would like to note that there are many other excellent reviews already posted regarding this addon Canon product. A plus or minus or neutral. Please try again later. Please try again later. I also own the original Canon EOS Digital Rebel 6.3 MP. The new Digital Rebel is noticeably smaller and lighter than the original Digital Rebel. In many ways, smaller size and lighter weight are a plus. But when using longer lenses, or when you need to steady a shot, a smaller and lighter camera body can be a problem. Thats where the Battery Grip comes to the rescue.

The BGE3 makes the camera easier to use, hold and shoot pictures. Without the BGE3 the camera feels too light, almost like it is going to jump out of your hands. In addition, the BGE3 has bottommounted duplicate controls. These controls make it easier to shoot vertical shots. Finally, the BGE3 also solves the problem of running out of battery power. New digital cameras can consume a lot of power. One single battery does not last all that much under intense shooting situations, such as shooting fast action shots at 3 fps. With the BGE3 you can use two lithium batteries, instead of the single one inside the cameras body. And if you ever run out of juice, or cant get to a recharger to get the batteries recharged, you can simply walk into any store, buy a pack of AA batteries and you are good to go once again. Other than buying a good quality lens, the BGE3 is the best accessory for yor new digital camera. Get it now and you will see! Please try again later. Please try again later. Philip M. Top Contributor Arduino 4.0 out of 5 stars Aside from that I wished Canon had a more universal grip, as now I have a T3i and need to buy another type for it. I understand the T3i has different batteries but in my opinion it could be designed to fit future batteries with a different batteryslot. At times I had a really really! hard time to take it off my camera. I needed to force it with screwdriver and a cloth to protect the camera, a screwdriver is not ideal for this but the only universal tool around to start twisting the screw. They should make the screw a little bigger or foresee a tool to twist it when it gets stuck. There are cheaper knockoffs but im not sure about their quality, some are probably ok. Please try again later. Please try again later. This battery grip does four things for me 1. It makes my camera look great, which makes me feel great on that ohsoimportant superficial level! 2. It makes the camera feel and handle so much better.

The Rebel has a small light body and it just doesnt fill up your hands or allow you to get a really good solid grip. The BGE3 changes that instantly and gives you that rock solid feeling whenever you pick up the camera. 3. Oh yeah, it makes your battery juice last forever. I guess that was the main point, but since I havent had to charge my batteries since I bought it Ive kind of forgotten. Ive had it for a month and take pictures all the time, so its really nice not to keep recharging batteries all the time. 4. It is great for portrait photography. Of all the accessories Ive purchased to complete my setup, this one makes me feel the happiest. I couldnt go back to my gripless life now! Please try again later. Please try again later. Nikole Campbell 4.0 out of 5 stars I am not sure if it is because I am running a flash as well which it shouldnt affect it but I only got about 45 minutes out of the use. I am going to get some new batteries and I am also going to try the AA option and see if it holds a charge longer. The grip fit perfect. It was in amazing condition. The shutter button works like a gem and it is so convenient to just turn and snap. The construction is awesome and the transition from the body to the grip is as seamless as it can be for two pieces. I am overall very satisfied and I am hoping that the battery charge is user error and not a fault of the grip. Please try again later. Please try again later. Brian Koch 5.0 out of 5 stars Now I am kicking myself for not getting it as soon as I got my XT. I use several large lenses such as the 100400 and 180 macro that weigh around 3 lbs and without the battery grip they were a pain to use without a tripod. But now they, and all of my other lenses,

are much easier to handle. Plus the extra controls on the side are great when using a tripod collar. The build quality is good and they even thought about a place to store the battery door from the camera body so you don't misplace it.

The extra battery life is also nice and the option to use regular batteries in a pinch gives you a real piece of mind when shooting away from home. Plus it makes the XT look a lot more professional and people seem to stay out of your way more when you at least look like you know what you are doing. So don't make the same mistake that I did, if you are reading this review and have the money to buy this, do it, you will not regret it. Please try again later. Please try again later. P. Sherman 5.0 out of 5 stars The Rebel XTi 400D is a great camera for what it is, but even though I don't have large hands, the XTi seemed just a little too small and light especially after using a very large Kodak Professional DCS 520 for the past several years. If you plan on using larger glass or a shoe-mounted flash, this helps balance the camera and provides a solid grip. Add the hand strap to the mix for a little more security on your grip. This grip is also particularly useful if you use the camera in portrait orientation frequently, as it makes it far more comfortable to hold. Some of the extra heft of the system includes using 2 battery packs you can just use one, if you prefer, which ensures you'll have plenty of battery power for a long shoot or use AA batteries with the included tray in a pinch. Before buying the battery grip, I read lots of reviews about the genuine Canon BGE3 and some of the 3rd party alternatives. I was convinced that the Canon was the way to go because of its build quality, even though it is more expensive. I've been really happy with mine, and I'd say it is a must have for all serious photographers using the XT or XTi. Please try again later. Please try again later. I agree with the May 21, 2005, review that the BGE3 enables you to hold the camera securely in a vertical position, and that it gives a longer battery life than the single NB2LH lithium ion battery that you put into the Canon Digital Rebel XT EOS 350D body.
